

Electrical fuel consumption measuring system

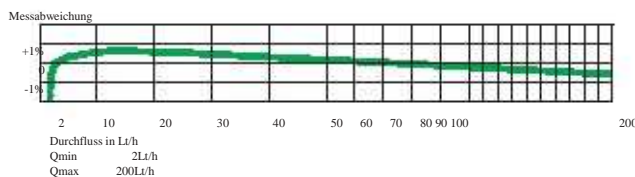

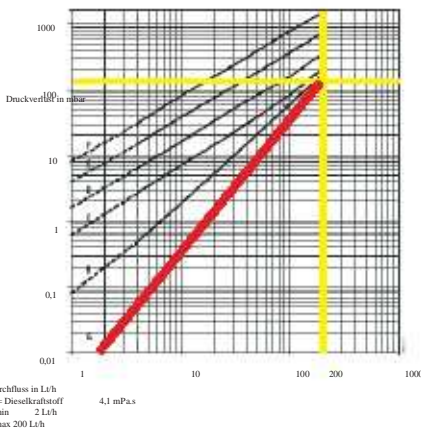

The specialists have turned their entire mind to create a manageable and serviceable device Diveko TripMaster.

Owing to its compact dimension the diveko Trip Master can be easily installed into every driver cab.

The large two-celled LED- display lets the driver read all the values with little effort. Furthermore the diveko Trip Master is equipped with a serial interface for you to print out the indispensable economical data.

Due to its special design the diveko fuel consumption measuring system is suitable for all traditional diesel engines with row fuel injection pump, dispenser fuel injection pump, as well as for engines with PT unit-injector. The compact design comprising the measuring system, the gas separator and the filter element in one unit guarantees simple and rapid installation. Optional there is an internal fuel preheat available.

The diveko fuel consumption measuring device is made of aluminum in order to ensure the robustness and efficiency for a long time. In combination with the diveko TripMaster the diveko fuel consumption measuring system reaches a measuring accuracy of +/-1%.
